Introduction

Index Objective

The S&P/ASX Australian Indices measure the performance of ASX-listed companies across various sizes, industries, themes, and strategies. Each index is designed to represent a certain segment of the Australian equities market.

The S&P/ASX Australian Indices family was created with the formation of the relationship between S&P Dow Jones Indices and the Australian Securities Exchange (ASX).

Index Family

- **S&P/ASX 20.** The index measures the performance of 20 actively-traded and highly liquid securities that are among the largest securities listed on the ASX by float-adjusted market capitalization (FMC).
- **S&P/ASX 50.** The index measures the performance of 50 of the largest and most liquid index-eligible stocks listed on the ASX by FMC.
- **S&P/ASX 100.** The index measures the performance of the 100 largest stocks listed on the ASX by float-adjusted market capitalization. The index represents both the LargeCap and MidCap components of the S&P/ASX index family.
- **S&P/ASX 200.** The index measures the performance of the 200 largest and most liquid stocks listed on the ASX by FMC.
- **S&P/ASX 300.** The index measures the performance of 300 of the largest, highly liquid securities listed on the ASX by FMC. The index includes the LargeCap, MidCap, and SmallCap components of the S&P/ASX index family.
- **S&P/ASX MidCap 50.** The index measures the performance of the Midcap component of the S&P/ASX 100, excluding the LargeCap component.
- **S&P/ASX Small Ordinaries.** The index measures the performance of companies included in the S&P/ASX 300, but not in the S&P/ASX 100.
 - **S&P/ASX Small Ordinaries Select.** The index measures the performance of SmallCap companies with positive earnings within the S&P/ASX Small Ordinaries.
- **S&P/ASX Mid-Small.** The index measures the performance of companies included in the S&P/ASX 300, but not in the S&P/ASX 50. The index is a combination of the S&P/ASX MidCap 50 and S&P/ASX Small Ordinaries indices.
- **S&P/ASX All Australian 50.** The index measures the performance of 50 of the largest, by FMC, highly-liquid ASX-listed securities defined as ‘domestic’ or ‘Australian’¹ for index purposes. This index is the Australian component of the S&P Global 1200.
- **S&P/ASX All Australian 200.** The index measures the performance of 200 of the largest, by FMC, highly-liquid ASX-listed securities defined as ‘domestic’ or ‘Australian’ for index purposes.
- **All Ordinaries.** The index measures the performance of the total Australian equity market and is composed of the 500 largest securities listed on the ASX, with no liquidity screen or minimum IWF requirement. The index is the only member of the S&P/ASX index family not weighted by FMC.

1. For a complete definition of “Domestic/Australian” securities, please refer to the section on *Eligibility Criteria*.

GICS Indices

The indices are designed to measure the performance of various sectors and industry groups within the Australian equities market, as defined by the Global Industry Classification Standard (GICS).

For more information on GICS, please refer to S&P Dow Jones Indices' Global Industry Classification Standard (GICS) Methodology.

Industrials and Resources Indices

The industrials and resource indices are represented for the S&P/ASX 100, S&P/ASX 200, S&P/ASX 300, S&P/ASX MidCap 50 and S&P/ASX Small Ordinaries. The indices are defined and constructed around criteria relating to GICS. Resources are defined as companies classified in the Energy sector (GICS Tier 1) and the Metals & Mining industry (GICS Tier 3). The industrials indices are composed of everything else and are distinctly different from the GICS Industrials sector.

Constituents' index shares are calculated using closing prices on the Wednesday prior to the second Friday of the rebalancing month as the reference price. Index shares are calculated and assigned to each stock to arrive at the weights determined on the reference date. Since index shares are assigned based on prices seven business days prior to rebalancing, the actual weight of each stock at the rebalancing may differ from these weights due to market movements.

For more information on capped index weight calculations please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

S&P/ASX 300 Metals & Mining Index. The index is based on the S&P/ASX 300, and is comprised of companies that are classified in the Metals & Mining industry (GICS Tier 3).

S&P/ASX All Ordinaries Gold Index. The index includes companies that are included in the Gold sub-industry (GICS Tier 4) of the All Ordinaries index.

Supporting Documents

This methodology is meant to be read in conjunction with supporting documents providing greater detail with respect to the policies, procedures and calculations described herein. References throughout the methodology direct the reader to the relevant supporting document for further information on a specific topic. The list of the main supplemental documents for this methodology and the hyperlinks to those documents is as follows:

Eligibility Criteria

Index Eligibility

Index constituents are drawn from the universe of ordinary and preferred equity stocks listed on the ASX.

Eligibility Factors

Listing. Only stocks listed on the ASX are considered for inclusion in any of the S&P/ASX indices.

Domicile. The index draws from the entire universe of ASX listed stocks, which includes both primary and secondary listings on the ASX. A secondary listing occurs when the ASX is not the primary exchange and the stock is listed in multiple markets. This includes foreign-domiciled entities that are incorporated or registered overseas and have their primary listing on an exchange other than the ASX.

Securities classified as 'foreign-domiciled' are eligible for inclusion in the majority of S&P/ASX indices, with the exception being the S&P/ASX All Australian 50 and the S&P/ASX All Australian 200. Foreign-domiciled securities may be subject to specialized treatment due to the data reporting conventions of certain foreign securities listed on the ASX. Such action is necessary in order to ensure the indices are representative of the Australian market while limiting constituent turnover and reducing index volatility. The rules relating to foreign-domiciled securities specifically relates to capitalization and index maintenance, as detailed further in the document.

Securities classified as 'domestic' are eligible for inclusion into all S&P/ASX indices and adhere to the commonly standardized index rules that determine index-eligibility and index-weight. Domestic securities are drawn upon to form the universe for the S&P/ASX All Australian 50 and the S&P/ASX All Australian 200.

The index definition of domestic and foreign-domicile is detailed as:

- **Domestic.** A company is considered to be domestic if:
 - The company is incorporated in Australia and traded on the ASX; or
 - The company is incorporated overseas but has an exclusive listing on the ASX; or
 - The company is incorporated overseas and is traded on other overseas markets, but most of the trading activity occurs on the ASX.
- **Foreign-Domicile.** Generally, a foreign-domicile company is a company that is:
 - Incorporated overseas; and/or
 - Listed on one or more overseas markets; and
 - Has the majority of its trading activity occurring on an overseas exchange.

When determining the domestic or foreign-domicile classification, the value and volume of shares traded on the ASX relative to any overseas market listings, is reviewed across various time periods of up to twelve months. Changes in classification will typically be made in cases where there is a clear and sustained majority of trading (60% or more) on the ASX relative to other overseas market listings, or vice versa. Any changes in classification as a result of a merger or acquisition are reviewed on case by case basis.

Eligible Securities. To be eligible, all common and equity preferred stocks (which are not of a fixed income nature) must be classified by GICS. Hybrid stocks such as convertible stock, bonds, warrants,

and preferred stock that provide a guaranteed fixed return are not eligible. Listed Investment Companies (LICs) and Listed Investment Trusts (LITs) that invest in a portfolio of securities are not eligible for index inclusion. Equity and Mortgage REITs are eligible for inclusion.

Companies that are currently the target of an acquisition are ineligible for inclusion or promotion within the S&P/ASX index hierarchy.

Market Capitalization. The S&P/ASX indices only include securities that are considered to be institutionally investable, and market capitalization is a key criterion for stock selection. Stocks are included if they are large enough to meet the minimum ranking requirements for the representative indices within the Australian market.

Except for the All Ordinaries, the market capitalization criterion for stock inclusion is based upon the daily average market capitalization of a security over the last three months. The ASX stock price history (last three months, adjusted for price-adjusting corporate actions), latest available shares on issue, and the Investable Weight Factor (IWF) are the relevant variables for the calculation. The IWF is a variable that is primarily used to determine the available float of a security for ASX-listed securities.

The All Ordinaries selects the largest 500 securities based on three-month average total market capitalization; all companies are assigned an IWF of 1 for ranking purposes.

Liquidity. Only securities that are regularly traded are eligible for inclusion in any S&P/ASX index. A stock's liquidity is measured relative to its peers¹. Relative Liquidity calculates as follows :

$$\text{Relative Liquidity} = \frac{\text{Stock Median Liquidity}}{\text{Market Liquidity}}$$

where:

- *Stock Median Liquidity* = median daily value traded (MDVT) on the ASX for each stock divided by the average float/index weight-adjusted market capitalization for the previous three months ;
- *Market Liquidity* is calculated using the market capitalization weighted average of the stock median liquidities of the 500 companies in the All Ordinaries. The S&P/ASX 300 weights stocks by float-adjusted market capitalization (FMC); otherwise, the unadjusted market capitalization is used for weighting purposes (i.e., an IWF of 1 for stocks in the All Ordinaries, but not the S&P/ASX 300).

Relative Liquidity thresholds are as follows:

- **S&P/ASX 200.** Stocks require a minimum Relative Liquidity of 50% for inclusion in the S&P/ASX 200 and higher hierarchical indices. Any stock's Relative Liquidity that drops below half of the 50% threshold becomes ineligible and is removed at the next rebalancing.
- **S&P/ASX 300.** Stocks require a minimum Relative Liquidity of 30% for inclusion in the S&P/ASX 300. Any stock's Relative Liquidity that drops below half of the 30% threshold becomes ineligible and is removed at the next rebalancing.

Sector Classification. Stocks are classified by GICS. GICS classifies a stock according to a number of measures, including revenues, earnings and the market's perception of a company.

In addition to the 11 GICS Sectors, S&P Dow Jones Indices also recognizes other industry segments relevant to the Australian market and calculates the following indices:

- A-REIT = Equity Real Estate Investment Trusts 6010 (GICS Tier 2) plus Mortgage Real Estate Investment Trusts 402040 (GICS Tier 3)

1. The liquidity calculations use total ASX value traded data, including both on- and off-market trades.

- Resources = Energy 10 (GICS Tier 1) plus Metals & Mining 151040 (GICS Tier 3); and Industrials = All other stocks
- Metals & Mining 151040 (GICS Tier 3)
- Gold 15104030 (GICS Tier 4)

Positive Earnings. For the S&P/ASX Small Ordinaries Select, as of each rebalancing reference date, earnings per share (EPS) data is taken for all stocks in the index universe (last twelve-months EPS data is given preference over fiscal year EPS data). Non-constituent stock's prior two years EPS must each be positive to be eligible for index inclusion. Current constituents' stocks with two consecutive years of negative EPS, as of the rebalancing reference date, become ineligible for index inclusion.

Quoted Shares Issued. When considering the index eligibility of securities for inclusion or promotion into S&P/ASX indices, the number of index securities under consideration is based upon the latest available ASX quoted securities. For domestic securities, this figure is purely based upon the latest available data from the ASX.

Foreign-domiciled securities may quote the total number of securities on the ASX that is representative of their global equity capital; whereas other foreign-domiciled securities may quote securities on the ASX on a partial basis that represents their Australian equity capital. In order to overcome this inconsistency, the S&P/ASX indices will quote the number of index securities that are represented by CHESS Depositary Interests (CDIs) for a foreign entity. When CDIs are not issued we will use the total securities held on the Australian register (CHESS and where supplied the Issuer Sponsored register). This quoted number for a foreign entity is representative of the Australian equity capital, thereby allowing the S&P/ASX indices to be increasingly reflective of the Australian market.

The number of CDIs or shares of a foreign entity quoted on the ASX can experience more volatility than is typically the case for ordinary shares on issue. Therefore, an average number will provide a more robust figure to gauge index market capitalization. The average number on issue will be applied over a three-month period. For CDIs that have been on issue for less than three months, the available history is applied. For CDIs included in indices due to a corporate action (e.g., a spin-off), the shares outstanding are reviewed at the following rebalance once a three-month average is available.

Where CDI information is not supplied to the ASX by the company or the company's share register, estimates for Australian equity capital will be drawn from CHESS data and, ultimately, registry-sourced data.

Monthly data for the number of CDIs and CHESS holdings is available on the ASX Web site at <https://www2.asx.com.au/listings/how-to-list/listing-requirements/foreign-entity-data>.

Index Construction

Constituent Selection

At each rebalancing, the eligible securities for each index are selected and form each index.

Index Calculations

The indices calculate by means of the divisor methodology used in all S&P Dow Jones Indices' equity indices.

Please refer to the Market Capitalization Weighted Indices section in S&P Dow Jones Indices' Index Mathematics Methodology for more information on the index calculation methodology.

Index Maintenance

Rebalancing

The indices rebalance regularly according to the schedules defined below. The reference date used for the trading data is the second to last Friday of the month prior to the rebalancing.

Frequency

- **S&P/ASX 20, S&P/ASX 50, S&P/ASX 100, S&P/ASX 200, S&P/ASX All Australian 50, and S&P/ASX All Australian 200.** The indices rebalance quarterly, effective after the market close on the third Friday of March, June, September, and December.
- **S&P/ASX 300 and S&P/ASX Small Ordinaries Select.** The indices rebalance semi-annually, effective after the market close on the third Friday of March and September.
- **S&P/ASX MidCap 50, S&P/ASX Mid-Small, and S&P/ASX Small Ordinaries.** The indices only rebalance when constituent changes are made in the respective underlying index.
- **All Ordinaries.** The index rebalances semi-annually, effective after the market close on the third Friday of March and September.

Rebalancing announcements are sent on the first Friday of March, June, September, and December; providing a two-week notice period before the rebalancing takes effect at each review.

The S&P/ASX 20, S&P/ASX 50, S&P/ASX 100, S&P/ASX 200, S&P/ASX 300 and the All Ordinaries are hierarchical (in the stated order) with respect to constituent membership, so any non-constituent stock added to an index is also added to all subsequent indices in the hierarchy. For example, a non-constituent company added to the S&P/ASX 200 is simultaneously added to the S&P/ASX 300 and All Ordinaries indices.

Eligible stocks are considered for index inclusion based on their rank relative to the stated quota of securities for each index within the S&P/ASX hierarchy. For example, a stock that is currently in the S&P/ASX 300 and is ranked at 175, based on FMC, within the universe of eligible securities may be considered for inclusion into the S&P/ASX 200, provided that liquidity hurdles are met.

Stocks that fail the relative liquidity criteria are typically removed from the FMC rankings. At the March and September rebalancings, current constituents and stocks that pass the S&P/ASX 300 relative liquidity requirement remain in the rankings as the size hierarchy is reviewed simultaneously.

Selection Buffers. The indices apply selection buffers by rank for both additions and deletions. If a non-constituent ranks higher than the buffer for a specific index at a given review, the non-constituent is added to the index in place of the existing constituent. Similarly, if an index constituent falls outside the buffer rule, the constituent is removed from the index.

Index	Rank Buffer for	
	Addition	Deletion
S&P/ASX 20	14 th or higher	26 th or lower
S&P/ASX 50	39 th or higher	61 st or lower
S&P/ASX 100	84 th or higher	116 th or lower
S&P/ASX 200	179 th or higher	221 st or lower
S&P/ASX 300	274 th or higher	326 th or lower

These FMC rank buffers serve as the guidelines used by the Index Committee to arrive at any potential constituent changes to the indices. However, the Index Committee has complete discretion to bypass these rules when circumstances warrant.

Intra-Rebalancing Additions. The S&P/ASX 20, S&P/ASX 50, S&P/ASX 100, and S&P/ASX 200 are fixed count indices so intra-rebalancing index additions are generally only made if a vacancy is created by an index deletion. The S&P/ASX 300 and All Ordinaries are not fixed count indices, so intra-rebalancing additions are only made when a replacement added to the S&P/ASX 200 (or higher index) is a non-constituent. Index additions are made according to market size and liquidity. The reference date used to determine the index replacement is determined on a case by case basis and taken closer to the time of the event that triggered the vacancy.

For the S&P/ASX Small Ordinaries Select, except for spin-offs, additions are made to the index only during the semi-annual rebalancings.

Intra-Rebalancing Deletions. Deletions can occur between index rebalancing dates due to acquisitions, mergers and spin-offs or due to suspension or bankruptcies. The decision to remove a stock from the index will be made once there is sufficient evidence that the transaction will be completed. Stocks that are removed due to merger and acquisition (M&A) activity are removed from the index at the closing price of the security on the deletion date for cash-only offers. Otherwise the best available price in the market is used.

For the S&P/ASX Small Ordinaries Select, constituents removed from the S&P/ASX Small Ordinaries are removed from the index simultaneously.

Corporate Actions. For more information on Corporate Actions, please refer to the Market Capitalization Indices section within S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Spin-offs. Except for the S&P/ASX Small Ordinaries Select, a spun-off company is added to all indices of the parent company at a zero price on the ex-date. Should the spun-off company not be considered eligible for any S&P/ASX index that it is added to on the basis of its FMC, then it will be removed from the respective index after at least one day of regular way trading.

For the S&P/ASX Small Ordinaries Select, a spun-off company is added to the index at a zero price on the ex-date and remains in the index until the next rebalancing. As of that rebalancing reference date, if the company reported positive earnings, it remains in the index; if the company reported negative earnings, it is removed from the index.

After the first earnings screen, the spin-off is treated according to the regular deletion rules.

Note that the first rebalancing reference date with company reporting earnings does not equate to being the actual next rebalancing reference date after the spin-off ex-date if that rebalancing occurs before the spin-off reports earnings.

Available price and value traded data as of the rebalancing reference date is used to determine eligibility for spin-offs.

Initial Public Offerings (IPOs) and Direct Listings (DLs).

An IPO or DL may be added to an index only when an appropriate vacancy occurs or as part of a scheduled rebalancing. The security must demonstrate at least eight weeks of liquidity.

The eight-week liquidity requirement may be exempted for extraordinarily large offerings where sizeable trading volumes justify index inclusion. The liquidity requirement exception applies only to the eight-week proven liquidity requirement; inclusion remains subject to an appropriate vacancy or scheduled rebalancing and all other applicable eligibility criteria. An extraordinarily large offering is an IPO/DL which might be considered for inclusion in the S&P/ASX 20 based on relative FMC rank.

Share Updates. Index constituent share counts are reviewed quarterly and are rounded to the nearest thousand ('000).

Share updates for foreign-domiciled securities will take place at each quarterly rebalancing. The update to the number of shares outstanding will only take place when the three-month average of CDIs or the Total Securities held in the Australian branch of issuer sponsored register (where supplied) and in CHESS, on the rebalancing reference date, differs from the current number of shares used by 5% or more.

Where CDI information is not supplied to the ASX by the company or the company's share register, estimates for Australian equity capital will be drawn from CHESS data and, ultimately, registry-sourced data. Monthly data for the number CDIs and CHESS holdings is available on the ASX Web site at: <https://www2.asx.com.au/listings/how-to-list/listing-requirements/foreign-entity-data>.

Investable Weight Factor (IWF)

IWFs are reviewed annually as part of the September quarterly rebalancing. In addition to the annual IWF review, certain events may warrant an intra-quarter or quarterly IWF update.

For more information on share and IWF updates, please refer to S&P Dow Jones Indices' Float Adjustment Methodology and S&P Dow Jones Indices' Equity Policies & Practices Methodology.

Except for the All Ordinaries, a company must have a minimum Investable Weight Factor (IWF) of 0.15 to be eligible for index inclusion; however, an IWF at or above that level is not necessary for ongoing index membership.

All Ordinaries. The index is total market capitalization weighted, with constituents assigned an IWF of 1.

The IWF for foreign domiciled securities is typically set to 1.

Currency of Calculation and Additional Index Return Series

Spot Forex rates, as supplied by LSEG, are taken daily at 4:17 PM Sydney time and used in the end-of-day calculation of all headline indices.

WMR foreign exchange rates are taken daily at 4:00 PM London Time and used in the calculation of certain indices. These mid-market fixings are calculated by WMR based on LSEG data and appear on LSEG pages.

Real-time spot Forex rates, as supplied by LSEG, are used for ongoing index calculation of real-time indices.

In addition to the indices detailed in this methodology, additional return series versions of the indices may be available, including, but not limited to: currency, currency hedged, decrement, fair value, inverse, leveraged, and risk control versions.

For a list of available indices, please refer to [S&P DJI Methodology & Regulatory Status Database](#).

For information on the calculation of different types of indices, please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

For the inputs necessary to calculate certain types of indices, including decrement, dynamic hedged, fair value, and risk control indices, please refer to the Parameters documents available at www.spglobal.com/spdji.

Franking Credit Adjusted Total Return Indices

Additional total return indices are available for a number of indices in the family, including the S&P/ASX 200 and S&P/ASX 300 that adjust for the tax effect of franking credits attached to cash dividends. The indices utilize tax rates relevant to two segments of investors: one version incorporates a 0% tax rate

relevant for tax-exempt investors and a second version uses a 15% tax rate relevant for superannuation funds. The franking credits attached to both regular and special cash dividends are included in the respective calculations.

- **Franking Credit Adjusted Annual Total Return Indices.** This index series accrues a pool of gross dividend points on a daily basis and reinvests them across the index annually after the end of the financial year. Reinvestment occurs at market close on the first trading day after June 30th. The gross dividend points are derived by taking the value of the gross dividend market capitalization (less the as reported dividend market capitalization) and dividing it by the index divisor effective on the ex-date of the respective dividend. The 0% and 15% tax rates are applied to the gross dividend amount to determine the net tax effect applied in the return calculation.
- **Franking Credit Adjusted Daily Total Return Indices.** Rather than allowing a separate accrual of gross dividend points, this index series reinvests the gross dividend amount across the index at the close of the ex-date on a daily basis. Again, the 0% and 15% tax rates are applied to the gross dividend amount to determine the net tax effect applied in the return calculation.

Dividend Points Indices

For more information on Dividend Points Indices, including the index calculation methodology, please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

Index Data

Calculation Return Types

S&P Dow Jones Indices calculates multiple return types which vary based on the treatment of regular cash dividends. The classification of regular cash dividends is determined by S&P Dow Jones Indices.

- Price Return (PR) versions are calculated without adjustments for regular cash dividends.
- Gross Total Return (TR) versions reinvest regular cash dividends at the close on the ex-date without consideration for withholding taxes.
- Net Total Return (NTR) versions, if available, reinvest regular cash dividends at the close on the ex-date after the deduction of applicable withholding taxes.

In the event there are no regular cash dividends on the ex-date, the daily performance of all three indices will be identical.

For a complete list of indices available, please refer to the daily index levels file (“SDL”).

For more information on the classification of regular versus special cash dividends as well as the tax rates used in the calculation of net return, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.

For more information on the calculation of return types, please refer to S&P Dow Jones Indices’ Index Mathematics Methodology.

Index Governance

Index Committee

The S&P/ASX Equity Indices Committee maintains the indices. S&P Dow Jones Indices' chairs the Index Committee, which is comprised of five voting members representing both S&P Dow Jones Indices and the Australian Securities Exchange.

The Index Committee meets regularly to review market developments and convenes as needed to address major corporate actions. At each meeting, the Committee may review pending corporate actions that may affect index constituents, statistics comparing the composition of the index to the market, companies that are being considered as candidates for addition to the index, and any significant market events. In addition, the Index Committee may revise index policy covering rules for selecting companies, treatment of dividends, share counts or other matters.

S&P Dow Jones Indices considers information about changes to its indices and related matters to be potentially market moving and material. Therefore, all Index Committee discussions are confidential.

S&P Dow Jones Indices' Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

For information on Quality Assurance and Internal Reviews of Methodology, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Index Policy

Announcements

All index constituents are evaluated daily for data needed to calculate index levels and returns. All events affecting the daily index calculation are typically announced in advance via the Index Corporate Events report (.SDE), delivered daily to all clients.

For more information, please refer to the Announcements section of S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Pro-forma Files

In addition to the corporate events file (.SDE), S&P Dow Jones Indices provides constituent pro-forma files for each index each time the indices rebalance. The pro-forma file is typically provided daily in advance of the rebalancing date and contains all constituents and index shares effective for the upcoming rebalancing.

Please visit www.spglobal.com/spdji for a complete schedule of rebalancing timelines and pro-forma delivery times.

Holiday Schedule

The S&P/ASX indices are calculated on all business days, this is inclusive of state public holidays. The exchange is closed for trading on national public holidays; indices are not calculated on those days.

A complete holiday schedule for the year is available at www.spglobal.com/spdji.

Rebalancing

The Index Committee may change the date of a given rebalancing for reasons including market holidays occurring on or around the scheduled rebalancing date. Any such change will be announced with proper advance notice where possible.

Unexpected Exchange Closures

For information on Unexpected Exchange Closures, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Recalculation Policy

For information on the recalculation policy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Real-Time Calculation

Real-time, intra-day, index calculations are executed for certain S&P/ASX price indices, with index values updated every 30 seconds as constituent prices change throughout the course of the day. Real-time indices are not restated.

For information on Calculations and Pricing Disruptions, Expert Judgment and Data Hierarchy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Index Cessation Fall Back Provisions

S&P DJI encourages market participants using the S&P/ASX 200 Index to have robust fall back provisions written into their contractual documentation for alternative arrangements to apply in the event of the cessation of the S&P/ASX 200 index. Market participants should be aware that various factors beyond the control of S&P DJI may necessitate changes to the S&P/ASX 200.

Contact Information

For questions regarding an index, please contact: index_services@spglobal.com.

Index Dissemination

Index levels are available through S&P Dow Jones Indices' Web site at www.spglobal.com/spdji, major quote vendors (see codes below), numerous investment-oriented Web sites, and various print and electronic media.

Tickers

The table below lists headline indices covered by this document. All versions of the below indices that may exist are also covered by this document. Please refer to [S&P DJI Methodology & Regulatory Status Database](#) for a complete list of indices covered by this document.

Index (Price Index)	BBG	RIC	IRESS
S&P/ASX 200	AS51	.AXJO	XJO
S&P/ASX 100	AS25	.ATOI	XTO
S&P/ASX 50	AS31	.AFLI	XFL
S&P/ASX 20	AS26	.ATLI	XTL

Appendix A: Related Indices

Unless otherwise specified, the related indices listed in this appendix follow the same methodology as the respective underlying index.

S&P/ASX All Technology Index

Index Objective. The index measures the performance of ASX-listed technology companies, as defined by their inclusion in the Information Technology GICS sector and certain specified GICS sub-industries listed above in *Eligibility Criteria*. The index is weighted by FMC, subject to a single constituent weight cap of 10% of the total index weight.

Eligibility Criteria. In addition to the eligibility criteria described above, at each rebalancing reference date, securities must satisfy the following criteria to be eligible for index inclusion:

- **Market Capitalization:** have a minimum three-month average FMC of AUD 120 million (current constituents AUD 80 million).
- **Liquidity:** have a minimum Relative Liquidity of 30%. Any stock's Relative Liquidity that drops below half of the 30% threshold becomes ineligible and is removed at the next rebalancing.
- **Median Daily Value Traded (MDVT):** have a minimum three-month MDVT of AUD 0.25 million (current constituents AUD 0.175 million).
- **Sector Classification:** must be classified in the following GICS categories:
 - Information Technology 45 (GICS Tier 1) plus Data Processing & Outsourced Services 20202030, Consumer Electronics 25201010, Health Care Technology 35103010, Transaction & Payment Processing Services 40201060, Interactive Media & Services 50203010 (GICS Tier 4)

Rebalancing. The index rebalances quarterly. Quarterly rebalancing changes take effect after the market close on the third Friday of March, June, September, and December.

Initial Public Offerings (IPOs) and Direct Listings (DLs). IPOs and DLs are eligible for fast-track entry, subject to the following conditions:

- Only newly public IPOs and DLs are eligible for fast-track entry.
- Fast-track IPO and DL additions must meet a minimum FMC threshold of AUD 300 million, calculated using the shares offered (excluding over-allotment options) and the closing price on the first day of trading on the ASX. The threshold level is reviewed from time to time and updated as needed to ensure consistency with market conditions.
- In addition, the IPO or DL must satisfy all other applicable index eligibility rules except for the liquidity requirement. If all necessary public information is available, S&P DJI verifies that the fast-track conditions have been met. Once S&P DJI announces that the IPO/DL is eligible for fast-track addition, the IPO/DL is added to the index with five business days lead time. Fast-track IPO/DL additions eligible to be added during a quarterly rebalancing freeze period are added on the rebalancing effective date.

Spin-offs. A spin-off is added to the index at a zero price on the ex-date. If the spin-off is classified in an ineligible GICS the spin-off is removed after at least one day of trading. If the spin-off is classified in an

eligible GICS the spin-off remains in the index until the next quarterly rebalancing when the spin-off is evaluated for continued inclusion.

Intra-Rebalancing Deletions. Constituents no longer classified in an eligible GICS are removed with at least one trading day's notice.

Corporate Actions. For more information on Corporate Actions, please refer to the Market Capitalization Indices section in S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

S&P/ASX Agribusiness Index

Index Objective. The index measures the performance of ASX-listed agribusiness companies with relevant business activity keywords within certain specified GICS sub-industries listed in *Eligibility Criteria*. The index is weighted by FMC, subject to a single constituent weight cap of 10% of the total index weight.

Eligibility Criteria. In addition to the eligibility criteria described above, at each rebalancing reference date, securities must satisfy the following criteria to be eligible for index inclusion:

- **Market Capitalization.** must be within the universe consisting of the largest, by total market capitalization, 1,000 ASX-listed securities.
- **Median Daily Value Traded (MDVT).** A minimum six-month MDVT of AUD 80,000 (current constituents AUD 64,000).
- **Sector Classification:** must be classified in the following GICS Agribusiness sub-industries, categorized as "core" or "non-core":
 - **Core Agribusiness** = Agricultural Products & Services 30202010, Fertilizers & Agricultural Chemicals 15101030, Agricultural & Farm Machinery 20106015
 - **Non-Core Agribusiness** = Paper Products 15105020, Food Distributors 30101020, Brewers 30201010, Distillers & Vintners 30201020, Packaged Foods & Meats 30202030, Pharmaceuticals 35202010, Water Utilities 55104010, Diversified REITs 60101010, Other Specialized REITs 60108010

For Non-Core Agribusiness sub-industries, eligible companies are identified through business activity descriptions where one or more of the following keywords are mentioned: Agri-, Aquaculture, Beverage, Brew, Cultivat-, Dairy, Farm, Fertilizer, Fish, Grocer, Hemp, Insecticide, Malt, Meat, Milk, Plantation, Potash, Spirit, Wine.

Keywords are not required for companies within Core Agribusiness sub-industries.

Rebalancing. The index rebalances semi-annually, effective after the market close on the third Friday of May and November. The reference date for data used in the rebalancing is the third Friday of April and October respectively. The index shares of each constituent are calculated using closing prices on the Wednesday prior to the second Friday of the rebalancing month as the reference price.

Intra-Rebalancing Deletions. Constituents no longer classified in an eligible GICS are removed with at least one trading days notice.

Spin-offs. A spin-off is added to the index at a zero price on the ex-date. If the spin-off is classified in an ineligible GICS it is removed after at least one day of trading. If the spin-off is classified in an eligible GICS it will remain in the index until the next semi-annual rebalancing, at which point it will be reviewed for ongoing inclusion.

Corporate Actions. For more information on Corporate Actions, please refer to the Market Capitalization Indices section within S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

S&P/ASX Equal Weight Indices

S&P/ASX 100 and S&P/ASX 200 Equal Weight Indices. Each index has the same constituent companies as their FMC-weighted counterpart, but each company is allocated a fixed weight of 1.00% for the S&P/ASX 100 Equal Weight and 0.50% for the S&P/ASX 200 Equal Weight at each quarterly rebalancing.

S&P/ASX 200 A-REIT Equal Weight Index. The index includes the same constituent companies as the FMC-weighted S&P/ASX 200 A-REIT. However, each company is allocated a fixed, equal weight at each quarterly rebalancing.

S&P/ASX 200 Industrials Equal Weight Index. The index includes the same constituent companies as the FMC-weighted S&P/ASX 200 Industrial, but equal weights constituent companies. Each company is allocated a fixed, equal weight at each quarterly rebalancing.

S&P/ASX 300 Equal Weight Index. The index includes the same constituent companies as the FMC-weighted S&P/ASX 300, but equal weights constituent companies. Also, while the S&P/ASX 300 rebalances semi-annually, the S&P/ASX 300 Equal Weight Index reweights constituents' weights quarterly.

For equal weight indices, constituents' index shares are calculated using closing prices on the Wednesday prior to the second Friday of the rebalancing month as the reference price. Index shares are calculated and assigned to each stock to arrive at the weights determined on the reference date. Since index shares are assigned based on prices seven business days prior to rebalancing, the actual weight of each stock at the rebalancing may differ from these weights due to market movements.

For more information on equal weight index calculations please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

Intra-Rebalancing Additions

Except for the S&P/ASX 200 A-REIT Equal Weight Index and the S&P/ASX 200 Industrials Equal Weight Index, when a company is added to the index intra-quarter, it takes the weight of the company that it replaced. The one exception is when a company is removed from an index at a price of \$0.00. In such a case, the company's replacement is added to the index at the weight using the previous day's closing value, or the most immediate prior business day that the deleted company was not valued at \$0.00.

S&P/ASX 200 A-REIT Equal Weight Index. An intra-quarter addition is only made to the index if a vacancy is created due to a REIT replacing another REIT in the parent S&P/ASX 200.

S&P/ASX 200 Industrials Equal Weight Index. Constituents no longer classified in an eligible GICS are removed at the following rebalancing. Except for spin offs, additions are only made during the quarterly rebalancing. Any constituent stock removed from the S&P/ASX 200 Index is removed from the index simultaneously.

Corporate Actions

For more information on Corporate Actions, please refer to the Equal Weighted Indices section within S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

S&P/ASX 200 Ex-S&P/ASX 100 Index (AUD)

Index Objective. The index measures the performance of the underlying index, excluding constituents that are also members of the S&P/ASX 100.

Underlying Index. S&P/ASX 200. For information on the underlying index, please refer to the S&P/ASX Australian Indices Methodology available at www.spglobal.com/spdji.

Index Eligibility. Constituents of the underlying index, excluding those constituents also in the S&P/ASX 100, are eligible for index inclusion.

Index Construction. See *Index Eligibility*.

Index Additions. Additions to the underlying index that are not also constituents of the S&P/ASX 100 are added to the index simultaneously. In addition, constituents of the S&P/ASX 100 deleted from that index that remain constituents of the underlying index are added to the index simultaneously.

Index Deletions. Constituents removed from the underlying index are removed from the index simultaneously. In addition, constituents that become members of the S&P/ASX 100 are deleted from the index on the same day that they join the S&P/ASX 100.

Constituent Weightings. The index is FMC weighted.

Index Maintenance. All index adjustments and corporate action treatments, including rebalancing, follow the underlying index.

Currency of Calculation. The index calculates in Australian dollars.

S&P/ASX Ex-Energy Indices

Index Objective. The indices measure the performance of the underlying index, excluding companies classified as part of the GICS Energy Sector (Code: 10).

Underlying Indices. At each rebalancing, the underlying index for each respective index is listed in the table below:

S&P/ASX Ex-Energy Index	Underlying Index
S&P/ASX 100 Ex-Energy Index (AUD)	S&P/ASX 100
S&P/ASX 200 Ex-Energy Index (AUD)	S&P/ASX 200
S&P/ASX 300 Ex-Energy Index (AUD)	S&P/ASX 300

Index Eligibility. At each rebalancing, constituents of the underlying index, excluding companies classified as part of the GICS Energy Sector (Code: 10), are eligible for index inclusion.

Index Construction. See *Index Eligibility*.

Index Additions. Additions to the underlying index that meet the eligibility criteria are added to the index simultaneously.

Index Deletions. Constituents removed from the underlying index are removed from the index simultaneously.

GICS Reclassification. Changes as a result of a constituent's GICS reclassification are made to the index on the reclassification effective date.

Constituent Weightings. The indices are FMC weighted.

Index Maintenance. All index adjustments and corporate action treatments, including rebalancing, follow the underlying index.

Currency of Calculation. The indices calculate in Australian dollars.

Appendix B

A Chronology of S&P/ASX Indices

1979: The All Ordinaries index was created, with a base date of December 31st, 1979, replacing the regional indices, which were independently run out of the Sydney and Melbourne exchanges.

1987: Global equity markets crash, with the All Ordinaries index recording its largest one-day loss, falling by 516 points (25%) on October 20th, 1987.

1988: ASX introduces the Stock Exchange Automated Trading system (SEATS) electronic trading platform.

1992: The Sydney Futures Exchange (SFE) issues the first equity futures contract in Australia.

1997: Spurred on by the technology boom, the All Ordinaries index records its highest one-day points gain, rising 144 points (6%) on October 29th, 1997.

1998: The ASX implements the first of a series of index rule changes, including the liquidity rule, whereby a stock's liquidity must be 50% of the overall market liquidity to be eligible for index inclusion.

2000: S&P Dow Jones Indices takes over the index business from the ASX, introducing:

- The S&P/ASX index series;
- End-of-day calculation of the 24 ASX sectors, for the S&P/ASX 200 and the S&P/ASX 300;
- The S&P/ASX 200 replaces the All Ordinaries index as the key institutional benchmark index for the Australian market;
- The All Ordinaries index subsequently changes to include 500 companies with no liquidity requirements for constituents, effectively becoming Australia's broad-based market "indicator" index.

2001: Introduction of Global Industry Classification Standard (GICS®) for the Australian market:

- Real-time GICS indices are launched for the S&P/ASX 200.
- End-of-day GICS indices are launched for the S&P/ASX 300.

2001: S&P Dow Jones Indices take over index calculation from the ASX, using proprietary index-calculation engines, streamlining the day-to-day index methodology, and allowing for earlier distribution of official closing index values.

2002: SSgA launches streetTRACKS 200 and 50 exchange-traded funds (ETFs) for the S&P/ASX 200, the S&P/ASX 50 and the S&P/ASX 200 Property Trust Indices.

- S&P Dow Jones Indices discontinues the Old 24 ASX sectors.
- The S&P/ASX methodology changes to incorporate float adjustment.
- The ASX launches the ASX Mini Futures contracts for the S&P/ASX 200.

2004: SFE launches the SPIDO (SFE SPI 200™) Intra-Day Options.

- The ASX launches the S&P/ASX Buy-Write Index.

- The S&P/ASX 200 Price Index rises above 4000 points in December.

2006: The S&P/ASX 200 Price Index closes above 5000 points in March.

- S&P Dow Jones Indices launches the S&P/ASX 300 Metals & Mining and All Ordinaries Gold Indices.

2007: The S&P/ASX 200 Price Index closes above 6000 points in March.

- The S&P/ASX methodology changes to extend index eligibility to foreign domiciled companies listed on the ASX.
- S&P Dow Jones Indices launches the S&P/ASX All Australian 50 and the S&P/ASX All Australian 200.

2009: S&P Dow Jones Indices launches the S&P/ASX Infrastructure and the S&P/ASX Emerging Companies Indices.

2010: S&P Dow Jones Indices launches the S&P/ASX 200 2x Inverse Daily Index and the S&P/ASX 200 2x Leverage Daily Index.

2010: S&P Dow Jones Indices launches the S&P/ASX Dividend Opportunities Index.

2011: S&P Dow Jones Indices launches the S&P/ASX Mid Small and the S&P/ASX 100 Equal Weight Indices.

2014: S&P Dow Jones Indices launches the S&P/ASX 200 A-REIT Equal Weight Index and the Franking Credit Adjusted Total Return Indices.

2015: S&P Dow Jones Indices launches the S&P/ASX 200 Futures Index.

2016: S&P Dow Jones Indices launches the S&P/ASX 200 Equal Weight Index.

2020: S&P Dow Jones Indices launches the S&P/ASX All Technology Index.

2022: S&P Dow Jones Indices launches the S&P/ASX Agribusiness Index.

2023: S&P Dow Jones Indices launches the S&P/ASX 300 Equal Weight Index.

Appendix C

Methodology Changes

Methodology changes since January 1, 2015, are as follows:

Change	Effective Date (After Close)	Methodology	
		Previous	Updated
Market Capitalization	09/19/2025	The market capitalization criterion for stock inclusion is based upon the daily average market capitalization of a security over the last six months. The ASX stock price history (last six months, adjusted for price-adjusting corporate actions), latest available shares on issue, and the Investable Weight Factor (IWF) are the relevant variables for the calculation. The All Ordinaries selects the largest 500 securities based on six-month average total market capitalization; all companies are assigned an IWF of 1 for ranking purposes.	The market capitalization criterion for stock inclusion is based upon the daily average market capitalization of a security over the last three months. The ASX stock price history (last three months, adjusted for price-adjusting corporate actions), latest available shares on issue, and the Investable Weight Factor (IWF) are the relevant variables for the calculation. The All Ordinaries selects the largest 500 securities based on three-month average total market capitalization; all companies are assigned an IWF of 1 for ranking purposes.
Liquidity	09/19/2025	Relative Liquidity is calculated as follows: $\text{Relative Liquidity} = \frac{\text{Stock Median Liquidity}}{\text{Market Liquidity}}$ where: Stock Median Liquidity is the median daily value traded on the ASX for each stock divided by the average float/index weight-adjusted market capitalization for the previous six months and; Market Liquidity is determined using the market capitalization weighted average of the stock median liquidities of the 500 companies in the All Ordinaries index. The market capitalization weight for stocks in the S&P/ASX 300 is float-adjusted, otherwise the unadjusted market capitalization is used for weighting purposes (i.e. an IWF of 1 for stocks in the All Ordinaries, but not the S&P/ASX 300)	Relative Liquidity calculates as follows: $\text{Relative Liquidity} = \frac{\text{Stock Median Liquidity}}{\text{Market Liquidity}}$ where: Stock Median Liquidity is the median daily value traded on the ASX for each stock divided by the average float/index weight-adjusted market capitalization for the previous three months and; Market Liquidity is determined using the market capitalization weighted average of the stock median liquidities of the 500 companies in the All Ordinaries index. The market capitalization weight for stocks in the S&P/ASX 300 is float-adjusted; otherwise, the unadjusted market capitalization is used for weighting purposes (i.e., an IWF of 1 for stocks in the All Ordinaries, but not the S&P/ASX 300)
Buffers	09/19/2025	Eligible non-constituent securities will generally only be considered for index inclusion once a current constituent stock is excluded due to a sufficiently low rank and/or liquidity, based on the float-adjusted market capitalization.	Selection Buffers. The indices apply selection buffers by rank for both additions and deletions. If a non-constituent ranks higher than the buffer for a specific index at a given review, the non-constituent is added to the index in place of the existing constituent. Similarly, if an index constituent falls outside the buffer rule, the constituent is removed from the index.
Investable Weight Factor (IWF)	09/19/2025	Companies in the S&P/ASX indices are assigned an Investable Weight Factor (IWF). Except for the All Ordinaries, a company must have a minimum IWF of	Except for the All Ordinaries, a company must have a minimum Investable Weight Factor (IWF) of 0.15 to be eligible for index inclusion; however, an IWF at or above that

Change	Effective Date (After Close)	Methodology	
		Previous	Updated
		0.3 to be eligible for index inclusion, however an IWF at or above that level is not necessary for ongoing index membership. The All Ordinaries is total market capitalization weighted, with all constituents assigned an IWF of 1. The IWF for foreign domiciled securities in the S&P/ASX indices is typically set to 1.	level is not necessary for ongoing index membership. All Ordinaries. The index is total market capitalization weighted, with constituents assigned an IWF of 1. The IWF for foreign domiciled securities in the S&P/ASX indices is typically set to 1.
Rebalancing Frequency: All Ordinaries	09/19/2025	The index rebalances annually, effective after the market close on the third Friday of March.	The index rebalances semi-annually, effective after the market close on the third Friday of March and September.
Sector Classification: S&P/ASX Agribusiness	03/17/2023	Agribusiness = Fertilizers & Agricultural Chemicals 15101030, Paper Products 15105020, Food Distributors 30101020, Brewers 30201010, Distillers & Vintners 30201020, Agricultural Products 30202010, Packaged Foods & Meats 30202030, Pharmaceuticals 35202010, Water Utilities 55104010, Diversified REITs 60101010, Specialized REITs 60101080	Agribusiness. Eligible GICS sub-industries are first categorized as "core" or "non-core": - Core Agribusiness = Agricultural Products & Services 30202010, Fertilizers & Agricultural Chemicals 15101030, Agricultural & Farm Machinery 20106015 - Non-Core Agribusiness = Paper Products 15105020, Food Distributors 30101020, Brewers 30201010, Distillers & Vintners 30201020, Packaged Foods & Meats 30202030, Pharmaceuticals 35202010, Water Utilities 55104010, Diversified REITs 60101010, Other Specialized REITs 60108010
Business Activity Description Keywords: S&P/ASX Agribusiness	03/17/2023	Eligible companies are identified through business activity descriptions where one or more of the following keywords are mentioned – Agri, Beverage, Brew, Cannabis, Dairy, Farm, Fertilizer, Fish, Grocer, Hemp, Insecticide, Malt, Meat, Milk, Plantation, Potash, Spirit, Wine.	For Non-Core Agribusiness sub-industries, eligible companies are identified through business activity descriptions where one or more of the following keywords are mentioned: Agri-, Aquaculture, Beverage, Brew, Cultivat-, Dairy, Farm, Fertilizer, Fish, Grocer, Hemp, Insecticide, Malt, Meat, Milk, Plantation, Potash, Spirit, Wine. Keywords are not required for companies within Core Agribusiness sub-industries.
Sector Classification S&P/ASX All Technology	03/17/2023	All Technology = Information Technology 45 (GICS Tier 1) plus Consumer Electronics 25201010, Internet & Direct Marketing Retail 25502020, Health Care Technology 35103010, Interactive Media & Services 50203010 (GICS Tier 4)	All Technology = Information Technology 45 (GICS Tier 1) plus Data Processing & Outsourced Services 20202030, Consumer Electronics 25201010, Health Care Technology 35103010, Transaction & Payment Processing Services 40201060, Interactive Media & Services 50203010 (GICS Tier 4)
Intra-Rebalancing Deletions	01/03/2023	Stocks that are removed due to M&A activity are removed from the index at the cash offer price for cash-only offers.	Stocks that are removed due to M&A activity are removed from the index at the closing price of the security on the deletion date for cash-only offers.
Constituent Weighting: S&P/ASX All Technology	12/17/2021	The index is weighted by float-adjusted market capitalization, subject to a single constituent weight cap of 25% of the total index weight.	The index is weighted by float-adjusted market capitalization, subject to a single constituent weight cap of 10% of the total index weight.
Liquidity Requirement: S&P/ASX All Technology	12/17/2021	Stocks must, as of the rebalancing reference date, have a minimum three-month median daily value traded of AUD 0.12 million (current constituents AUD 0.080 million).	Stocks must, as of the rebalancing reference date, have a minimum three-month median daily value traded of AUD 0.25 million (current constituents AUD 0.175 million).
Fast-Track IPO Inclusion Criteria: S&P/ASX All Technology	12/17/2021	—	IPOs are eligible for fast-track entry, subject to the following conditions: Only newly public IPOs and direct placement listings will be considered

Change	Effective Date (After Close)	Methodology	
		Previous	Updated
			eligible for fast-track entry. - Fast-track IPO additions must meet a minimum float-adjusted market capitalization threshold of AUD 300 million, calculated using the shares offered (excluding over-allotment options) and the closing price on the first day of trading on the ASX. The threshold level is reviewed from time to time and updated as needed to assure consistency with market conditions. - In addition, the IPO will need to meet all other applicable index eligibility rules except for the liquidity requirement. If all necessary public information is available, S&P DJI verifies that the fast-track conditions have been met. Once S&P DJI announces that the IPO is eligible for fast-track addition, it is added to the index with five business days lead time. Fast-track IPO additions eligible to be added during a quarterly rebalancing freeze period will be added on the rebalancing effective date.
Rebalancing Reference Date and Announcement Date	09/02/2021	The rebalancing reference date for data used is the last Friday of the month prior to the rebalance month in March, June and December. Rebalance announcements are made on the second Friday of March, June and December. The rebalancing reference date is the second to last Friday of the month prior to the rebalance in September. Rebalance announcements are made on the first Friday of September.	The rebalancing reference date for data used is the second to last Friday of the month prior to the rebalance month. Rebalancing announcements are made on the first Friday of March, June, September, and December.
Share Updates	03/27/2020	Updates will be made to the number of shares outstanding if the difference between the current number of shares used and the latest figure quoted by the ASX differs by 5% or more, as at the quarterly rebalancing reference date. Intra-quarter share changes are implemented at the effective date or as soon as reliable information is available; however, they will only take place in the following circumstances: - Changes in a company's shares outstanding of 5% or more due to market-wide shares issuance or major off-market buy-backs; - Right's issues, bonus issues and other major corporate actions; - Share issues resulting from index companies merging. Share changes due to mergers or acquisitions are implemented when the transaction occurs, even if both of the companies are not in the same index and regardless of the size of the change. Notification of intra-quarter changes to	Shares are updated in accordance with the S&P Dow Jones Indices' Equity Policies & Practices Methodology.

Change	Effective Date (After Close)	Methodology	
		Previous	Updated
		the number of issued shares generally takes place three business days prior to the index implementation date.	
IWF Updates	03/27/2020	IWFs are reviewed annually as part of the September quarterly review. However, any event that alters the float of a security in excess of 5% will be implemented as soon as practicable by an adjustment to the IWF.	IWFs are updated in accordance with the S&P Dow Jones Indices' Equity Policies & Practices Methodology.
Share Updates of Foreign-Domiciled Securities	06/21/2019	Share updates for foreign-domiciled securities take place annually at the March rebalancing. The update to the number of shares outstanding only takes place when the six-month average of CDIs or the Total Securities held in the Australian branch of issuer sponsored register (where supplied) and in CHESS, as of the March rebalancing, differs from the current number of shares used by 5% or more.	Share updates for foreign-domiciled securities take place quarterly at each rebalancing. The update to the number of shares outstanding only takes place when the three-month average of CDIs or the Total Securities held in the Australian branch of issuer sponsored register (where supplied) and in CHESS, as of the rebalancing, differs from the current number of shares used by 5% or more.
Treatment of Quarterly Share Updates	08/24/2018	Updates to the number of issued shares are considered if the change is at least 5% of the float-adjusted shares or A\$ 100 million in value. Share updates for foreign-domiciled securities take place annually at the March rebalancing. Updates to the number of index shares only take place when the six-month average of CHESS Depository Interests (CDIs) or the Total Securities held in the Australian branch of the issuer-sponsored register (where supplied) and in CHESS, as of the March rebalancing, differs from the current index shares by either 5% or a market-cap dollar amount greater than A\$ 100 million.	The update to the number of issued shares is considered if the change is at least 5% of the shares outstanding. Share updates for foreign-domiciled securities take place annually at the March rebalancing. Updates to the number of shares outstanding only take place when the six-month average of CDIs or the Total Securities held in the Australian branch of the issuer-sponsored register (where supplied) and in CHESS, as of the March rebalancing, differs by least 5% from the current shares outstanding.
Treatment of Intra-quarter Share Changes	08/24/2018	Intra-quarter share changes are made when there are changes in a company's float-adjusted shares of at least 5% due to market-wide share issuances as well as for Dividend Reinvestment Plan share issuances of more than A\$100 million in value.	Intra-quarter share changes are made when there are changes in a company's shares outstanding of at least 5% due to market-wide share issuances.
Reference Date	08/24/2018	The reference date used for the six months' worth of trading data is the last Friday of the month prior to the rebalancing.	Except for the September rebalancing, the reference date used for the six months' worth of trading data is the last Friday of the month prior to the rebalancing. For the September rebalancing, the reference date used for the six months' worth of trading data is the second to last Friday of the month prior to the rebalancing.
Weight Used for Intra-quarter Replacements: S&P/ASX 100 Equal Weight Index	10/07/2016	Intra-quarter replacements are added to the index with a weight of 1.00%.	Intra-quarter replacements are added to the index at the weight of the company they are replacing.
Index Name Change: S&P/ASX 100 Equal Weight Index	10/04/2016	The index name is S&P/ASX 100 Equal Weighted Index.	The index name is S&P/ASX 100 Equal Weight Index.

Disclaimer

Performance Disclosure/Back-Tested Data

Where applicable, S&P Dow Jones Indices and its index-related affiliates (“S&P DJI”) defines various dates to assist our clients by providing transparency. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which the index is set to a fixed value for calculation purposes. The Launch Date designates the date when the values of an index are first considered live: index values provided for any date or time period prior to the index’s Launch Date are considered back-tested. S&P DJI defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via the company’s public website or its data feed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed “Date of introduction”) is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the Index’s public release date.

Please refer to the methodology for the Index for more details about the index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Information presented prior to an index’s launch date is hypothetical back-tested performance, not actual performance, and is based on the index methodology in effect on the launch date. However, when creating back-tested history for periods of market anomalies or other periods that do not reflect the general current market environment, index methodology rules may be relaxed to capture a large enough universe of securities to simulate the target market the index is designed to measure or strategy the index is designed to capture. For example, market capitalization and liquidity thresholds may be reduced. In addition, forks have not been factored into the back-test data with respect to the S&P Cryptocurrency Indices. For the S&P Cryptocurrency Top 5 & 10 Equal Weight Indices, the custody element of the methodology was not considered; the back-test history is based on the index constituents that meet the custody element as of the Launch Date. Also, the treatment of corporate actions in back-tested performance may differ from treatment for live indices due to limitations in replicating index management decisions. Back-tested performance reflects application of an index methodology and selection of index constituents with the benefit of hindsight and knowledge of factors that may have positively affected its performance, cannot account for all financial risk that may affect results and may be considered to reflect survivor/look ahead bias. Actual returns may differ significantly from, and be lower than, back-tested returns. Past performance is not an indication or guarantee of future results.

Typically, when S&P DJI creates back-tested index data, S&P DJI uses actual historical constituent-level data (e.g., historical price, market capitalization, and corporate action data) in its calculations. As ESG investing is still in early stages of development, certain datapoints used to calculate certain ESG indices may not be available for the entire desired period of back-tested history. The same data availability issue could be true for other indices as well. In cases when actual data is not available for all relevant historical periods, S&P DJI may employ a process of using “Backward Data Assumption” (or pulling back) of ESG data for the calculation of back-tested historical performance. “Backward Data Assumption” is a process that applies the earliest actual live data point available for an index constituent company to all prior historical instances in the index performance. For example, Backward Data Assumption inherently assumes that companies currently not involved in a specific business activity (also known as “product involvement”) were never involved historically and similarly also assumes that companies currently involved in a specific business activity were involved historically too. The Backward Data Assumption allows the hypothetical back-test to be extended over more historical years than would be feasible using only actual data. For more information on “Backward Data Assumption” please refer to the FAQ. The methodology and factsheets of any index that employs backward assumption in the back-tested history will explicitly state so. The methodology will include an Appendix with a table setting forth the specific data points and relevant time period for which backward projected data was used. Index returns shown do not

represent the results of actual trading of investable assets/securities. S&P DJI maintains the index and calculates the index levels and performance shown or discussed but does not manage any assets.

Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the Index or investment funds that are intended to track the performance of the Index. The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the Index performance shown. As a simple example, if an index returned 10% on a US \$100,000 investment for a 12-month period (or US \$10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US \$1,650), the net return would be 8.35% (or US \$8,350) for the year. Over a three-year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US \$5,375, and a cumulative net return of 27.2% (or US \$27,200).

ESG Indices Disclaimer

S&P DJI provides indices that seek to select, exclude, and/or weight index constituents based on, but not limited to, certain environmental, social or governance (ESG) indicators, or a combination of those indicators, including the following: environmental indicators (including the efficient use of natural resources, the production of waste, greenhouse gas emissions, or impact on biodiversity); social indicators (such as, inequality and investment in human capital); governance indicators (such as sound management structures, employee relations, remuneration of staff, tax compliance, respect for human rights, anti-corruption and anti-bribery matters), specific sustainability or values-related company involvement indicators (for example, production/distribution of controversial weapons, tobacco products, or thermal coal), or controversies monitoring (including research of media outlets to identify companies involved in ESG-related incidents).

S&P DJI ESG indices use ESG metrics and scores in the selection and/or weighting of index constituents. ESG scores or ratings seek to measure or evaluate a company's, or an asset's, performance with respect to environmental, social and corporate governance issues.

The ESG scores, ratings, and other data used in S&P DJI ESG indices is supplied directly or indirectly by third parties (note these parties can be independent affiliates of S&P Global or unaffiliated entities) so an S&P DJI ESG index's ability to reflect ESG factors depends on these third parties' data accuracy and availability.

ESG scores, ratings, and other data may be reported (meaning that the data is provided as disclosed by companies, or an asset, or as made publicly available), modelled (meaning that the data is derived using a proprietary modelling process with only proxies used in the creation of the data), or reported and modelled (meaning that the data is either a mix of reported and modelled data or is derived from the vendor using reported data /information in a proprietary scoring or determination process).

ESG scores, ratings, and other data, whether from an external and/or internal source, is based on a qualitative and judgmental assessment, especially in the absence of well-defined market standards, and due to the existence of multiple approaches and methodologies to assess ESG factors and considerations. An element of subjectivity and discretion is therefore inherent in any ESG score, rating, or other data and different ESG scoring, rating, and/or data sources may use different ESG assessment or estimation methodologies. Different persons (including ESG data ratings, or scoring providers, index administrators or users) may arrive at different conclusions regarding the sustainability or impact of a particular company, asset, or index.

Where an index uses ESG scores, ratings or other data supplied directly or indirectly by third parties, S&P DJI does not accept responsibility for the accuracy or completeness of such ESG scores, ratings, or data.

No single clear, definitive test or framework (legal, regulatory, or otherwise) exists to determine 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives. In the absence of well-defined market standards and due to the existence of multitude approaches, the exercise of judgment is necessary. Accordingly, different persons may classify the same investment, product and/or strategy differently regarding 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives. Furthermore, the legal and/or market position on what constitutes an 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives may change over time, especially as further regulatory or industry rules and guidance are issued and the ESG sustainable finance framework becomes more sophisticated.

Prospective users of an S&P DJI ESG Index are encouraged to read the relevant index methodology and related disclosures carefully to determine whether the index is suitable for their potential use case or investment objective.
